Ventech Solutions QurCloud & Codice CelerKost

A Healthcare Cloud Platform That Delivers

CHALLENGE & OPPORTUNITY

In 2021, a premier software and systems solution company Codice, was looking for a cloud platform that could host their flagship healthcare cost reporting application. This hosting platform needed to be unique, addressing compliance with the Health Insurance Portability and Accountability Act of 1996 (HIPAA) standards, and be HITRUST-certified within Amazon Web Services (AWS). The platform also needed to be readily available and adaptive to Codice-specific technology and security control requirements.

APPROACH & SOLUTION

Ventech Solutions - QurCloud™

As an AWS Advanced Consulting Partner with extensive experience within the public and private healthcare industry, Ventech Solutions was a perfect match for Codice. QurCloud™ is a new innovative cloud platform designed by Ventech Solutions to address the stringent security standards of the healthcare landscape and aid organizations in accelerating their time to deliver by offering pre-configured healthcare security services. Ventech Solutions was excited by the opportunity to join Codice in their effort.

After discussing the requirements and objectives of CelerKost™ (software built by Codice that required secure hosting), Ventech Solutions determined QurCloud would be the ideal solution for Codice. The benefit of QurCloud is its extensive security and managed service features. QurCloud has out-of-the-box services that give Codice the flexibility to change their security and deployment controls as their software changes. The QurCloud platform also has state-of-the-art reporting that gives Codice application performance and security visibility that other platforms do not have.

HIPAA AND HITRUST

HIPAA and HITRUST-certified platforms are critical requirements for healthcare technology software servicers like Codice. Without obtaining a platform certification, products like CelerKost cannot be used by some clients.

QurCloud is HIPAA and HITRUST-certified, resides in AWS and leverages many of the AWS services, as well as today's leading security, identity management and reporting products. The benefit to Codice is a low-cost, minimal-effort approach of incorporating the necessary services and functionality to satisfy HIPAA and HITRUST requirements.

RESULTS & BENEFITS

Based on the project's aggressive timeline and security requirements, QurCloud was the ideal solution for Codice. Ventech Solutions provided a thorough demonstration of the QurCloud platform and how it would address the needs of Codice and their CelerKost application. Once a contract was ratified between both parties, Ventech Solutions provided Codice their security environment to begin development within two weeks.

This case study is one of many success stories that QurCloud brings to healthcare clients. Ventech Solutions is committed to making QurCloud the premiere platform for a rapidly changing healthcare technology world.
